Woodland Ecosystem Study

Vocabulary Crossword #1

Directions: Use the vocabulary words for the Woodland Ecosystem Study to complete the crossword.

Down

2. the green pigment found in plants that can use light energy from the sun to turn water and carbon dioxide gas into sugar and oxygen
3. the process where dead material is broken down into simple elements that can be returned to the soil and atmosphere
4. the tissues of a vascular plant that transport dissolved nutrients (food) from the leaves to the other parts of the plant
5. the liquid transported by the phloem and xylem tissues of a plant

Across

1. a community of living (biotic) organisms and non-living (abiotic) environmental factors working together as a unit
4. the process by which green plants manufacture simple sugars in the presence of sunlight, carbon dioxide, water and chlorophyll
6. an area that provides an animal or plant with adequate food, water, shelter and living space in a suitable arrangement
7. the tissues of a vascular plant that transport nutrient-rich water upwards from the roots throughout the plant
8. a thin layer in a plant stem where new growth begins
9. a condition where the plants and animals living together in an area depend upon one another for survival
